

**Results of Moran's I test on UAH regression. Correlation is very low and in any event the p-values show no significance. The three tests are for distance weights of  $1/x$ ,  $1/x^2$ , and  $1/\sqrt{x}$**

```
Moran's I test under randomisation

data: resid(res.uah)
weights: global.lw1

Moran I statistic standard deviate = 0.7011, p-value = 0.2416
alternative hypothesis: greater
sample estimates:

Moran I statistic      Expectation      Variance
0.0113039646 -0.0022779043 0.0003753246

Moran's I test under randomisation

data: resid(res.uah)
weights: global.lw2

Moran I statistic standard deviate = -0.2466, p-value = 0.5974
alternative hypothesis: greater
sample estimates:

Moran I statistic      Expectation      Variance
-0.036286980 -0.002277904 0.019026826

Moran's I test under randomisation

data: resid(res.uah)
weights: global.lw3
```

Moran I statistic standard deviate = 1.0123, p-value = 0.1557

alternative hypothesis: greater

sample estimates:

Moran I statistic	Expectation	Variance
6.878378e-03	-2.277904e-03	8.181368e-05

**Result of Moran's I test on regression using RSS.** This shows a certain amount of spatial autocorrelation of the residuals with a significance just below the 95% level. (p=.053)

Moran's I test under randomisation

data: resid(res.rss)

weights: global.lw1

Moran I statistic standard deviate = 1.6169, p-value = 0.05295

alternative hypothesis: greater

sample estimates:

Moran I statistic	Expectation	Variance
0.0290363996	-0.0022779043	0.0003750836

**Regression Results for Model E data with economic data.** Note that as reported by Schmidt a number of the economic variables show significance, although the coefficients are extremely small.

Call:

```
lm(formula = model_surf ~ model_trop + slp + dry + dslp + Water +
    abslat + g + e + x + p + m + y + c, data = global)
```

Residuals:

F-statistic: 70.44 on 13 and 426 DF, p-value: < 2.2e-16

**Results of Moran's I test for the regression using model data.** As hypothesized in Schmidt there is spatial autocorrelation, which might make the economic variables significance overstated. The statistic is positive and the p-value shows that it is significant. This makes sense since the economic variables could not possibly affect the model results.

```
